

Clean Slate (clinoptilolite zeolite)

After months of research, I've come to understand clearly that the products at [The Root Brands](#) are **the best detox products on the market**.

[[Go here](#) for a general info sheet on the benefits of clinoptilolite zeolite.]

Clean Slate ([go here to order](#))

- Raw ingredient is 97% pure zeolite clinoptilolite with 3% bentonite clay
- [No other zeolite like it](#)
 - Starts where other zeolites leave off
 - Other zeolites can harm silica, which is what's needed to remove toxins, including the spike proteins and adjuvants from vaccines
 - The formulator of Clean Slate sources from the only mine that has this particular clinoptilolite—no one else can get it or extract it and she's patented the process of unlocking the bioavailable silica (silicon dioxide) that's the most important part of the sodium-alumino-silicate of clinoptilolite
 - Contains orthosilicic acid—the formulator is the only person in the world who knows how to unlock the acid from its most bioavailable form
- Embeds frequencies of healing to increase efficacy (prayer, magnets, and polarization) and communicates regeneration of every cell of the body
- Rips apart the viruses and bacteria and stops cellular communication and vaccine adjuvants; grabs onto and removes:
 - graphene oxide
 - aluminum oxide
 - iron oxide
 - parasites
 - spike proteins

- heavy metals (involved in 5G and fungus and one of the primary causes of autoimmunity)
- Embedded with trace minerals to prevent mineral depletion/mineral gapping and support the cell in regeneration *
 - Helps to prevent mineral gapping and autoimmunity—adjuvants and heavy metals displace minerals in the cell receptor sites (gapping), so cells can't absorb any minerals, even from supplements, in the presence of heavy metals
 - Makes metals inert and regenerates cells
- Encapsulated in Vitamin C, which is the lock that gets everything into the cell, then frequency goes into mitochondria
 - Cleans cells, cleans mitochondria, and starts regeneration

* **Note:** With [Clean Slate](#), the minerals are embedded so you don't need extra to support the detox function. Taking minerals next to a zeolite is not the same thing and this is why Dr. Rahm embedded them. For those who are severely mineral depleted, they can continue to take extra trace minerals through the day, as well as take advantage of the trace minerals in [The Root Brand's](#) Immune Defense Shield and Relive Greens.

Dosing Clean Slate

Take meds **two hours** from any Root products, on empty stomach, which can be taken in a small amount of water or ideally, under the tongue.

Below is the low and slow method. These aren't directions, they're guidelines.

Clean Slate for adults

One drop in the morning, 1 drop in the evening. Next day, 2 drops in the morning, 2 in the evening. And so on until 20 drops per day total, 10 morning/10 evening.

Clean Slate for children

It doesn't go by age or weight. Take the child's age, cut it in half and that is the total drops for the day. So a 12-year-old would have 6 total drops per day, split into 3 drops in the morning and 3 drops in the evening. But start with 1 drop in the morning, 1 in the evening, as above for adults, but max out at half the child's age.

Historic use of natural zeolite clinoptilolite found in Clean Slate

Zeolite clinoptilolite has been used in **livestock feeds** for decades to prevent aflatoxicosis, the poisoning that results from ingestion of aflatoxins, the carcinogenic mycotoxins produced by the *Aspergillus flavus* and *Aspergillus parasiticus* species of fungi. Aflatoxins are amongst the most carcinogenic substances known.

Shortly after the **Fukushima** disaster, the Japanese government began ordering the dropping of zeolites in the oceans surrounding the disaster site.

It's had a variety of roles in tackling the dramatic and detrimental effects of the **Chernobyl** disaster. Over 500,000 tons of clinoptilolite zeolite were shipped in from Ukraine, Georgia, and Russia—the material was successfully used to decontaminate low-level radiation waters. It was also used by the Bulgarian government for their Chernobyl disaster. They found the Rhodope Mountains rich in zeolite and the people were unaffected.

It's been used extensively in reducing environmental impacts of major accidents, such as the **3-Mile Island** event in Pennsylvania, which has led to further use of natural zeolites due to its affinity to both strontium and cesium.
